| :--- | :--- |

1) A particle moving in an open area has components of velocity $v_{x}=2.6 \mathrm{~m} / \mathrm{s}$ and $\mathrm{v}_{y}=-1.8 \mathrm{~m} / \mathrm{s}$ at $t_{1}=10.0 \mathrm{~s}$. For the time interval from $\mathrm{t}_{1}=10.0 \mathrm{~s}$ to $\mathrm{t}_{2}=20.0 \mathrm{~s}$, the average acceleration of the particle has magnitude $0.45 \mathrm{~m} / \mathrm{s}^{2}$ and direction $31.0^{\circ}$ measured from the +x -axis. At $\mathrm{t}_{2}$ $=20.0 \mathrm{~s}$ :
a) What are the x - and y -components of the particle's velocity?
b) What are the magnitude and direction of the particle's velocity?
2) Two balls $A$ and $B$ are thrown from the top of a vertical cliff. Ball $A$ is thrown horizontally reaching the ground in 3.5 s . Ball B is thrown with an initial velocity of $25 \mathrm{~m} / \mathrm{s}$ at angle of 30 above the horizontal.
a) What is the height of the cliff?
b) How far from the base of the cliff will B hit the ground?
c) What is the initial velocity of ball A if it hits the same point as ball B on the ground?
(14 points)
3) a) In the figure below, the weight w is 60 N and the system is in equilibrium.
i) what is the value of the tension $T$ ?
ii) Find the the horizontal forces $\mathbf{F}_{\mathbf{1}}$ and $\mathbf{F}_{\mathbf{2}}$

## (7 points)

b) Two blocks $A$ and $B$ each with a weight of 60 N , are held in place on a frictionless incline of an angle $37^{\circ}$ as show in the figure.
i) Find the tension in the rope connecting the blocks.
ii) Find the tension in the rope connecting block A to the wall.
(7 points)
