

CHAPTER 6

Section 6-1

6-1. Sample average:

$$\bar{x} = \frac{\sum_{i=1}^n x_i}{n} = \frac{592.035}{8} = 74.0044 \text{ mm}$$

Sample variance:

$$\sum_{i=1}^8 x_i = 592.035$$

$$\sum_{i=1}^8 x_i^2 = 43813.18031$$

$$s^2 = \frac{\sum_{i=1}^n x_i^2 - \frac{\left(\sum_{i=1}^n x_i\right)^2}{n}}{n-1} = \frac{43813.18031 - \frac{(592.035)^2}{8}}{8-1}$$

$$= \frac{0.0001569}{7} = 0.000022414 \text{ (mm)}^2$$

Sample standard deviation:

$$s = \sqrt{0.000022414} = 0.00473 \text{ mm}$$

The sample standard deviation could also be found using

$$s = \sqrt{\frac{\sum_{i=1}^n (x_i - \bar{x})^2}{n-1}} \quad \text{where} \quad \sum_{i=1}^8 (x_i - \bar{x})^2 = 0.0001569$$

Dot Diagram:

There appears to be a possible outlier in the data set.

6-2. Sample average:

$$\bar{x} = \frac{\sum_{i=1}^{19} x_i}{19} = \frac{272.82}{19} = 14.359 \text{ min}$$

Sample variance:

$$\sum_{i=1}^{19} x_i = 272.82$$

$$\sum_{i=1}^{19} x_i^2 = 10333.8964$$

$$\begin{aligned} s^2 &= \frac{\sum_{i=1}^n x_i^2 - \frac{\left(\sum_{i=1}^n x_i\right)^2}{n}}{n-1} = \frac{10333.8964 - \frac{(272.82)^2}{19}}{19-1} \\ &= \frac{6416.49}{18} = 356.47 \text{ (min)}^2 \end{aligned}$$

Sample standard deviation:

$$s = \sqrt{356.47} = 18.88 \text{ min}$$

The sample standard deviation could also be found using

$$s = \sqrt{\frac{\sum_{i=1}^n (x_i - \bar{x})^2}{n-1}}$$

where

$$\sum_{i=1}^{19} (x_i - \bar{x})^2 = 6416.49$$

6-3. Sample average:

$$\bar{x} = \frac{84817}{12} = 7068.1 \text{ yards}$$

Sample variance:

$$\sum_{i=1}^{12} x_i = 84817$$

$$\sum_{i=1}^{19} x_i^2 = 600057949$$

$$s^2 = \frac{\sum_{i=1}^n x_i^2 - \frac{\left(\sum_{i=1}^n x_i\right)^2}{n}}{n-1} = \frac{600057949 - \frac{(84817)^2}{12}}{12-1}$$

$$= \frac{564324.92}{11} = 51302.265 \text{ (yards)}^2$$

Sample standard deviation:

$$s = \sqrt{51302.265} = 226.5 \text{ yards}$$

The sample standard deviation could also be found using

$$s = \sqrt{\frac{\sum_{i=1}^n (x_i - \bar{x})^2}{n-1}}$$

where

$$\sum_{i=1}^{12} (x_i - \bar{x})^2 = 564324.92$$

Dot Diagram: (rounding was used to create the dot diagram)

6-4. Sample mean:

$$\bar{x} = \frac{\sum_{i=1}^{18} x_i}{18} = \frac{2272}{18} = 126.22 \text{ kN}$$

Sample variance:

$$\sum_{i=1}^{18} x_i = 2272$$

$$\sum_{i=1}^{18} x_i^2 = 298392$$

$$s^2 = \frac{\sum_{i=1}^n x_i^2 - \frac{\left(\sum_{i=1}^n x_i\right)^2}{n}}{n-1} = \frac{298392 - \frac{(2272)^2}{18}}{18-1}$$

$$= \frac{11615.11}{17} = 683.24 \text{ (kN)}^2$$

Sample standard deviation:

$$s = \sqrt{683.24} = 26.14 \text{ kN}$$

The sample standard deviation could also be found using

$$s = \sqrt{\frac{\sum_{i=1}^n (x_i - \bar{x})^2}{n-1}}$$

where

$$\sum_{i=1}^{18} (x_i - \bar{x})^2 = 11615.11$$

Dot Diagram:

6-5. Sample average:

$$\bar{x} = \frac{351.8}{8} = 43.975$$

Sample variance:

$$\sum_{i=1}^8 x_i = 351.8$$

$$\sum_{i=1}^{19} x_i^2 = 16528.403$$

$$s^2 = \frac{\sum_{i=1}^n x_i^2 - \frac{\left(\sum_{i=1}^n x_i\right)^2}{n}}{n-1} = \frac{16528.043 - \frac{(351.8)^2}{8}}{8-1}$$

$$= \frac{1057.998}{7} = 151.143$$

Sample standard deviation:

$$s = \sqrt{151.143} = 12.294$$

The sample standard deviation could also be found using

$$s = \sqrt{\frac{\sum_{i=1}^n (x_i - \bar{x})^2}{n-1}}$$

where

$$\sum_{i=1}^8 (x_i - \bar{x})^2 = 1057.998$$

Dot Diagram:

6-6. Sample average:

$$\bar{x} = \frac{\sum_{i=1}^{35} x_i}{35} = \frac{28368}{35} = 810.514 \text{ watts/m}^2$$

Sample variance:

$$\sum_{i=1}^{19} x_i = 28368$$

$$\sum_{i=1}^{19} x_i^2 = 23552500$$

$$s^2 = \frac{\sum_{i=1}^n x_i^2 - \frac{\left(\sum_{i=1}^n x_i\right)^2}{n}}{n-1} = \frac{23552500 - \frac{(28368)^2}{35}}{35-1} = \frac{559830.743}{34} = 16465.61 \text{ (watts/m}^2\text{)}^2$$

Sample standard deviation:

$$s = \sqrt{16465.61} = 128.32 \text{ watts/m}^2$$

The sample standard deviation could also be found using

$$s = \sqrt{\frac{\sum_{i=1}^n (x_i - \bar{x})^2}{n-1}}$$

where

$$\sum_{i=1}^{35} (x_i - \bar{x})^2 = 559830.743$$

6-7. $\mu = \frac{6905}{1270} = 5.44$; The value 5.44 is the population mean since the actual physical population of all flight times during the operation is available.

6-8 a.) Sample average:

$$\bar{x} = \frac{\sum_{i=1}^n x_i}{n} = \frac{19.56}{9} = 2.173 \text{ mm}$$

b.) Sample variance:

$$\sum_{i=1}^9 x_i = 19.56$$

$$\sum_{i=1}^9 x_i^2 = 45.953$$

$$s^2 = \frac{\sum_{i=1}^n x_i^2 - \frac{\left(\sum_{i=1}^n x_i\right)^2}{n}}{n-1} = \frac{45.953 - \frac{(19.56)^2}{9}}{9-1} = \frac{3.443}{8} = 0.4303 \text{ (mm)}^2$$

Sample standard deviation:

$$s = \sqrt{0.4303} = 0.6560 \text{ mm}$$

c.) Dot Diagram

6-9. Dot Diagram (rounding of the data is used to create the dot diagram)

The sample mean is the point at which the data would balance if it were on a scale.

a. Dot Diagram of CRT data in exercise 6-5 (Data were rounded for the plot)

Dotplot for Exp 1-Exp 2

The data are centered a lot lower in the second experiment. The lower CRT resolution reduces the visual accommodation.

6-11. a) $\bar{x} = \frac{\sum_{i=1}^n x_i}{n} = \frac{57.47}{8} = 7.184$

b) $s^2 = \frac{\sum_{i=1}^n x_i^2 - \frac{\left(\sum_{i=1}^n x_i\right)^2}{n}}{n-1} = \frac{412.853 - \frac{(57.47)^2}{8}}{8-1} = \frac{0.00299}{7} = 0.000427$

$s = \sqrt{0.000427} = 0.02066$

c) Examples: repeatability of the test equipment, time lag between samples, during which the pH of the solution could change, and operator skill in drawing the sample or using the instrument.

6-12 sample mean $\bar{x} = \frac{\sum_{i=1}^n x_i}{n} = \frac{748.0}{9} = 83.11$ drag counts

sample variance $s^2 = \frac{\sum_{i=1}^n x_i^2 - \frac{\left(\sum_{i=1}^n x_i\right)^2}{n}}{n-1} = \frac{62572 - \frac{(748.0)^2}{9}}{9-1}$
 $= \frac{404.89}{8} = 50.61$ drag counts²

sample standard deviation $s = \sqrt{50.61} = 7.11$ drag counts

Dot Diagram

6-13. a) $\bar{x} = 65.86 ^\circ F$
 $s = 12.16 ^\circ F$

b) Dot Diagram

c) Removing the smallest observation (31), the sample mean and standard deviation become
 $\bar{x} = 66.86 ^\circ F$
 $s = 10.74 ^\circ F$

Mean = 59.87 Standard Deviation = 12.50 Median = 59.45

Yes, the histogram shows the same shape as the stem-and-leaf display.

6-38 Yes, the histogram of the distance data shows the same shape as the stem-and-leaf display in exercise 6-25.

- 6-39 Histogram for the speed data in exercise 6-26. Yes, the histogram of the speed data shows the same shape as the stem-and-leaf display in exercise 6-26

- 6-40 Yes, the histogram of the wine rating data shows the same shape as the stem-and-leaf display in exercise 6-27.

Roughly 63% of defects are described by parts out of contour and parts under trimmed.

Section 6-5

6-42 Descriptive Statistics of O-ring joint temperature data

Variable	N	Mean	Median	TrMean	StDev	SE Mean
Temp	36	65.86	67.50	66.66	12.16	2.03

Variable	Minimum	Maximum	Q1	Q3
Temp	31.00	84.00	58.50	75.00

a.)

Lower Quartile: $Q_1=58.50$

Upper Quartile: $Q_3=75.00$

b.) Median = 67.50

c.) Data with lowest point removed

Variable	N	Mean	Median	TrMean	StDev	SE Mean
Temp	35	66.86	68.00	67.35	10.74	1.82

Variable	Minimum	Maximum	Q1	Q3
Temp	40.00	84.00	60.00	75.00

The mean and median have increased and the standard deviation and difference between the upper and lower quartile has decreased.

d.) Box Plot - The box plot indicates that there is an outlier in the data.

6-43. Descriptive Statistics

Variable	N	Mean	Median	Tr Mean	StDev	SE Mean
PMC	20	4.000	4.100	4.044	0.931	0.208
Variable	Min	Max	Q1	Q3		
PMC	2.000	5.200	3.150	4.800		

- a) Sample Mean: 4
b) Sample Variance: 0.867
Sample Standard Deviation: 0.931
c)

6-44 Descriptive Statistics

Variable	N	Mean	Median	TrMean	StDev	SE Mean
time	8	2.415	2.440	2.415	0.534	0.189
Variable	Minimum	Maximum	Q1	Q3		
time	1.750	3.150	1.912	2.973		

- a.) Sample Mean: 2.415
Sample Standard Deviation: 0.543
b.) Box Plot – There are no outliers in the data.

6-45. Descriptive Statistics

Variable	N	Mean	Median	Tr Mean	StDev	SE Mean
Temperat	9	952.44	953.00	952.44	3.09	1.03
Variable	Min	Max	Q1	Q3		
Temperat	948.00	957.00	949.50	955.00		

- a) Sample Mean: 952.44
Sample Variance: 9.55
Sample Standard Deviation: 3.09
b) Median: 953; Any increase in the largest temperature measurement will not affect the median.
c)

6-46 Descriptive statistics

Variable	N	Mean	Median	TrMean	StDev	SE Mean
drag coefficients	9	83.11	82.00	83.11	7.11	2.37

Variable	Minimum	Maximum	Q1	Q3
drag coefficients	74.00	100.00	79.50	84.50

- a.) Upper quartile: $Q_1 = 79.50$
Lower Quartile: $Q_3 = 84.50$
b.)

c.) Variable	N	Mean	Median	TrMean	StDev	SE Mean
drag coefficients	8	81.00	81.50	81.00	3.46	1.22
Variable	Minimum	Maximum	Q1	Q3		
drag coefficients	74.00	85.00	79.25	83.75		

Removing the largest observation (100) lowers the mean and median. Removing this “outlier also greatly reduces the variability as seen by the smaller standard deviation and the smaller difference between the upper and lower quartiles.

6-47.

Descriptive Statistics

Variable	N	Mean	Median	Tr Mean	StDev	SE Mean
temperat	24	48.125	49.000	48.182	2.692	0.549
Variable	Min	Max	Q1	Q3		
temperat	43.000	52.000	46.000	50.000		

- a) Sample Mean: 48.125
Sample Median: 49
- b) Sample Variance: 7.246
Sample Standard Deviation: 2.692
- c)

The data appear to be slightly skewed.

4-48 The golf course yardage data appear to be skewed. Also, there is an outlying data point above 7500 yards.

6-49

Boxplot for problem 6-49

This plot conveys the same basic information as the stem and leaf plot but in a different format. The outliers that were separated from the main portion of the stem and leaf plot are shown here separated from the whiskers.

6-50 The box plot shows that the data are symmetrical about the mean. It also shows that there are no outliers in the data. These are the same interpretations seen in the stem-leaf-diagram.

6-51

Boxplot for problem 6-51

This plot, as the stem and leaf one, indicates that the data fall mostly in one region and that the measurements toward the ends of the range are more rare.

6-52 The box plot and the stem-leaf-diagram show that the data are very symmetrical about the mean. It also shows that there are no outliers in the data.

6-53

Boxplot for problem 6-53

The plot indicates that most balls will fall somewhere in the 250-275 range. In general, the population is grouped more toward the high end of the region. This same type of information could have been obtained from the stem and leaf graph of problem 6-25.

- 6-54 The box plot shows that the data are not symmetrical about the mean. The data are skewed to the right and have a longer right tail (at the lower values). It also shows that there is an outlier in the data. These are the same interpretations seen in the stem-leaf-diagram.

6-55

Boxplot for problem 6-55

We can see that the two distributions seem to be centered at different values.

- 6-56 The box plot shows that there is a difference between the two formulations. Formulation 2 has a higher mean cold start ignition time and a larger variability in the values of the start times. The first formulation has a lower mean cold start ignition time and is more consistent. Care should be taken, though since these box plots for formula 1 and formula 2 are made using 8 and 10 data points respectively. More data should be collected on each formulation to get a better determination.

Section 6-6

- 6-57. Time Series Plot

Computer response time appears random. No trends or patterns are obvious.

6-58 a.) Stem-leaf-plot of viscosity N = 40
Leaf Unit = 0.10

2	42	89
12	43	0000112223
16	43	5566
16	44	
16	44	
16	45	
16	45	
16	46	
16	46	
17	47	2
(4)	47	5999
19	48	000001113334
7	48	5666689

The stem-leaf-plot shows that there are two “different” sets of data. One set of data is centered about 43 and the second set is centered about 48. The time series plot shows that the data starts out at the higher level and then drops down to the lower viscosity level at point 24. Each plot gives us a different set of information.

b.) If the specifications on the product viscosity are 48.0 ± 2 , then there is a problem with the process performance after data point 24. An investigation needs to take place to find out why the location of the process has dropped from around 48.0 to 43.0. The most recent product is not within specification limits.

6-59. a)

b) Stem-and-leaf display for Problem 2-23. Force: unit = 1 112 represents 12

```

3    17 | 558
6    18 | 357
14   19 | 00445589
18   20 | 1399
(5)  21 | 00238

10  10|13
8   11|8
7   12|245
4   13|128

HI |154

```

The data appears to decrease between 1790 and 1835, the stem and leaf plot indicates skewed data.

6-62 a.) Time Series Plot

Each year the miles flown peaks during the summer hours. The number of miles flown increased over the years 1964 to 1970.

b.) Stem-and-leaf of miles fl N = 84

Leaf Unit = 0.10

1	6	7
10	7	246678889
22	8	013334677889
33	9	01223466899
(18)	10	022334456667888889
33	11	012345566
24	12	11222345779
13	13	1245678
6	14	0179
2	15	1
1	16	2

When grouped together, the yearly cycles in the data are not seen. The data in the stem-leaf-diagram appear to be nearly normally distributed.

Section 6-7

6-63

The pattern of the data indicates that the sample may not come from a normally distributed population or that the largest observation is an outlier. Note the slight bending downward of the sample data at both ends of the graph.

6-64

It appears that the data do not come from a normal distribution. Very few of the data points fall on the line.

6-65

There is no evidence to doubt that data are normally distributed

6-66

The data appear to be normally distributed. Although, there are some departures from the line at the ends of the distribution.

6-67

There are a few points outside the confidence limits, indicating that the sample is not perfectly normal. These deviations seem to be fairly small though.

6-68

The data appear to be normally distributed. Although, there are some departures from the line at the ends of the distribution.

6-69

The data seem to be normally distributed. Notice that there are clusters of observations because of the discrete nature of the ratings.

6-70

The data appear to be normally distributed. Nearly all of the data points fall very close to, or on the line.

6-71

Both populations seem to be normally distributed, moreover, the lines seem to be roughly parallel indicating that the populations may have the same variance and differ only in the value of their mean.

6-72 Yes, it is possible to obtain an estimate of the mean from the 50th percentile value of the normal probability plot. The fiftieth percentile point is the point at which the sample mean should equal the population mean and 50% of the data would be above the value and 50% below. An estimate of the standard deviation would be to subtract the 50th percentile from the 64th percentile. These values are based on the values from the z-table that could be used to estimate the standard deviation.

Supplemental Exercises

6-73. a) Sample Mean = 65.083

The sample mean value is close enough to the target value to accept the solution as conforming. There is a slight difference due to inherent variability.

b) $s^2 = 1.86869$ $s = 1.367$

A major source of variability would include measurement to measurement error.

A low variance is desirable since it may indicate consistency from measurement to measurement.

$$6-74 \quad a) \sum_{i=1}^6 x_i^2 = 10,433 \quad \left(\sum_{i=1}^6 x_i \right)^2 = 62,001 \quad n = 6$$

$$s^2 = \frac{\sum_{i=1}^6 x_i^2 - \frac{\left(\sum_{i=1}^6 x_i \right)^2}{n}}{n-1} = \frac{10,433 - \frac{62,001}{6}}{6-1} = 19.9\Omega^2$$

$$s = \sqrt{19.9\Omega^2} = 4.46\Omega$$

$$b) \sum_{i=1}^6 x_i^2 = 353 \quad \left(\sum_{i=1}^6 x_i \right)^2 = 1521 \quad n = 6$$

$$s^2 = \frac{\sum_{i=1}^6 x_i^2 - \frac{\left(\sum_{i=1}^6 x_i \right)^2}{n}}{n-1} = \frac{353 - \frac{1,521}{6}}{6-1} = 19.9\Omega^2$$

$$s = \sqrt{19.9\Omega^2} = 4.46\Omega$$

Shifting the data from the sample by a constant amount has no effect on the sample variance or standard deviation.

$$c) \sum_{i=1}^6 x_i^2 = 1043300 \quad \left(\sum_{i=1}^6 x_i \right)^2 = 6200100 \quad n = 6$$

$$s^2 = \frac{\sum_{i=1}^6 x_i^2 - \frac{\left(\sum_{i=1}^6 x_i \right)^2}{n}}{n-1} = \frac{1043300 - \frac{6200100}{6}}{6-1} = 1990\Omega^2$$

$$s = \sqrt{1990\Omega^2} = 44.61\Omega$$

Yes, the rescaling is by a factor of 10. Therefore, s^2 and s would be rescaled by multiplying s^2 by 10^2 (resulting in $1990\Omega^2$) and s by 10 (44.6Ω).

- 6-75 a) Sample 1 Range = 4
Sample 2 Range = 4
Yes, the two appear to exhibit the same variability
- b) Sample 1 $s = 1.604$
Sample 2 $s = 1.852$
No, sample 2 has a larger standard deviation.
- c) The sample range is a relatively crude measure of the sample variability as compared to the sample standard deviation since the standard deviation uses the information from every data point in the sample whereas the range uses the information contained in only two data points - the minimum and maximum.

- 6-76 a.) It appears that the data may shift up and then down over the 80 points.

- b.) It appears that the mean of the second set of 40 data points may be slightly higher than the first set of 40.

c.) Descriptive Statistics: viscosity 1, viscosity 2

Variable	N	Mean	Median	TrMean	StDev	SE Mean
Viscosity1	40	14.875	14.900	14.875	0.948	0.150
Viscosity2	40	14.923	14.850	14.914	1.023	0.162

There is a slight difference in the mean levels and the standard deviations.

6-77

Both sets of data appear to have the same mean although the first half seem to be concentrated a little more tightly. Two data points appear as outliers in the first half of the data.

6-78

There appears to be a cyclic variation in the data with the high value of the cycle generally increasing. The high values are during the winter holiday months.

b) We might draw another cycle, with the peak similar to the last year's data (1969) at about 12.7 thousand bottles.

6-79 a) Stem-and-leaf display for Problem 2-35: unit = 1 1|2 represents 12

```

1      0T|3
8      0F|4444555
18     0S|6666777777
(7)    0o|8888999
15     1*|111
12     1T|22233
7      1F|45
5      1S|77
3      1o|899

```

b) Sample Average = 9.325
Sample Standard Deviation = 4.4858

c)

The time series plot indicates there was an increase in the average number of nonconforming springs made during the 40 days. In particular, the increase occurs during the last 10 days.

6-80 a.) Stem-and-leaf of errors N = 20
Leaf Unit = 0.10

```

3      0 000
10     1 0000000
10     2 0000
6      3 00000
1      4 0

```

b.) Sample Average = 1.700
Sample Standard Deviation = 1.174

c.)

The time series plot indicates a slight decrease in the number of errors for strings 16 - 20.

6-81

Both sets of data appear to be normally distributed and with roughly the same mean value. The difference in slopes for the two lines indicates that a change in variance might have occurred. This could have been the result of a change in processing conditions, the quality of the raw material or some other factor.

6-82

There appears to be no evidence that the data are not normally distributed. There are some repeat points in the data that cause some points to fall off the line.

6-83

Although we do not have sufficient data points to really see a pattern, there seem to be no significant deviations from normality for either sample. The large difference in slopes indicates that the variances of the populations are very different.

8-84 a.)

The data do not appear to be normally distributed. There is a curve in the line.

b.)

After the transformation $y^* = \log(y)$, the normal probability plot shows no evidence that the data are not normally distributed.

6-85

- There is a difference in the variability of the measurements in the trials. Trial 1 has the most variability in the measurements. Trial 3 has a small amount of variability in the main group of measurements, but there are four outliers. Trial 5 appears to have the least variability without any outliers.
- All of the trials except Trial 1 appear to be centered around 850. Trial 1 has a higher mean value
- All five trials appear to have measurements that are greater than the “true” value of 734.5.
- The difference in the measurements in Trial 1 may indicate a “start-up” effect in the data. There could be some bias in the measurements that is centering the data above the “true” value.

6-86 a.) Descriptive Statistics

Variable	N	Mean	Median	TrMean	StDev	SE Mean
density	29	5.4541	5.4600	5.4611	0.4072	0.0756

b.) There does appear to be a low outlier in the data.

c.) Due to the very low data point at 4.07, the mean may be lower than it should be. Therefore, the median would be a better estimate of the density of the earth. The median is not affected by outliers.

Mind Expanding Exercises

$$6-87 \quad \sum_{i=1}^9 x_i^2 = 62572 \quad \left(\sum_{i=1}^9 x_i \right)^2 = 559504 \quad n = 9$$

$$s^2 = \frac{\sum_{i=1}^9 x_i^2 - \frac{\left(\sum_{i=1}^9 x_i \right)^2}{n}}{n-1} = \frac{62572 - \frac{559504}{9}}{9-1} = 50.61$$

$$s = \sqrt{50.61} = 7.11$$

Subtract 30 and multiply by 10

$$\sum_{i=1}^9 x_i^2 = 2579200 \quad \left(\sum_{i=1}^9 x_i \right)^2 = 22848400 \quad n = 9$$

$$s^2 = \frac{\sum_{i=1}^9 x_i^2 - \frac{\left(\sum_{i=1}^9 x_i \right)^2}{n}}{n-1} = \frac{2579200 - \frac{22848400}{9}}{9-1} = 5061.1$$

$$s = \sqrt{5061.1} = 71.14$$

Yes, the rescaling is by a factor of 10. Therefore, s^2 and s would be rescaled by multiplying s^2 by 10^2 (resulting in 5061.1) and s by 10 (71.14). Subtracting 30 from each value has no effect on the variance or standard deviation. This is because $V(aX + b) = a^2 V(X)$.

$$6-88 \quad \sum_{i=1}^n (x_i - a)^2 = \sum_{i=1}^n (x_i - \bar{x})^2 + n(\bar{x} - a)^2; \text{ The sum written in this form shows that the quantity is minimized when } a = \bar{x}.$$

$$6-89 \quad \text{Of the two quantities } \sum_{i=1}^n (x_i - \bar{x})^2 \text{ and } \sum_{i=1}^n (x_i - \mu)^2, \text{ the quantity } \sum_{i=1}^n (x_i - \bar{x})^2 \text{ will be smaller given that } \bar{x} \neq \mu. \text{ This is because } \bar{x} \text{ is based on the values of the } x_i \text{'s. The value of } \mu \text{ may be quite different for this sample.}$$

6-90 $y_i = a + bx_i$

$$\begin{aligned}\bar{x} &= \frac{\sum_{i=1}^n x_i}{n} \quad \text{and} \quad \bar{y} = \frac{\sum_{i=1}^n (a + bx_i)}{n} = \frac{na + b \sum_{i=1}^n x_i}{n} = a + b\bar{x} \\ s_x^2 &= \frac{\sum_{i=1}^n (x_i - \bar{x})^2}{n-1} \quad \text{and} \quad s_x = \sqrt{s_x^2} \\ s_y^2 &= \frac{\sum_{i=1}^n (a + bx_i - a + b\bar{x})^2}{n-1} = \frac{\sum_{i=1}^n (bx_i - b\bar{x})^2}{n-1} = \frac{b^2 \sum_{i=1}^n (x_i - \bar{x})^2}{n-1} = b^2 s_x^2\end{aligned}$$

Therefore, $s_y = bs_x$

6-91 $\bar{x} = 835.00^\circ\text{F}$ $s_x = 10.5^\circ\text{F}$

The results in $^\circ\text{C}$:

$$\bar{y} = -32 + 5/9\bar{x} = -32 + 5/9(835.00) = 431.89^\circ\text{C}$$

$$s_y^2 = b^2 s_x^2 = (5/9)^2 (10.5)^2 = 34.028^\circ\text{C}$$

6-92 Using the results found in Exercise 6-90 with $a = -\frac{\bar{x}}{s}$ and $b = 1/s$, the mean and standard deviation of the z_i are $\bar{z} = 0$ and $s_z = 1$.

6-93. Yes, in this case, since no upper bound on the last electronic component is available, use a measure of central location that is not dependent on this value. That measure is the median.

$$\text{Sample Median} = \frac{x_{(4)} + x_{(5)}}{2} = \frac{63 + 75}{2} = 69 \text{ hours}$$

$$6-94 \quad \text{a) } \bar{x}_{n+1} = \frac{\sum_{i=1}^{n+1} x_i}{n+1} = \frac{\sum_{i=1}^n x_i + x_{n+1}}{n+1}$$

$$\bar{x}_{n+1} = \frac{n\bar{x}_n + x_{n+1}}{n+1}$$

$$\bar{x}_{n+1} = \frac{n}{n+1} \bar{x}_n + \frac{x_{n+1}}{n+1}$$

$$\begin{aligned} \text{b) } ns_{n+1}^2 &= \sum_{i=1}^n x_i^2 + x_{n+1}^2 - \frac{\left(\sum_{i=1}^n x_i + x_{n+1}\right)^2}{n+1} \\ &= \sum_{i=1}^n x_i^2 + x_{n+1}^2 - \frac{\left(\sum_{i=1}^n x_i\right)^2}{n+1} - \frac{2x_{n+1} \sum_{i=1}^n x_i}{n+1} - \frac{x_{n+1}^2}{n+1} \\ &= \sum_{i=1}^n x_i^2 + \frac{n}{n+1} x_{n+1}^2 - \frac{n}{n+1} 2x_{n+1} \bar{x}_n - \frac{\left(\sum_{i=1}^n x_i\right)^2}{n+1} \\ &= \left[\sum_{i=1}^n x_i^2 - \frac{(\sum x_i)^2}{n+1} \right] + \frac{n}{n+1} [x_{n+1}^2 - 2x_{n+1} \bar{x}_n] \\ &= \sum_{i=1}^n x_i^2 + \left[\frac{(\sum x_i)^2}{n} - \frac{(\sum x_i)^2}{n} \right] - \frac{(\sum x_i)^2}{n+1} + \frac{n}{n+1} [x_{n+1}^2 - 2x_n \bar{x}_n] \\ &= \sum_{i=1}^n x_i^2 - \frac{(\sum x_i)^2}{n} + \frac{(n+1)(\sum x_i)^2 - n(\sum x_i)^2}{n(n+1)} + \frac{n}{n+1} [x_{n+1}^2 - 2x_n \bar{x}_n] \\ &= (n-1)s_n^2 + \frac{(\sum x_i)^2}{n(n+1)} + \frac{n}{n+1} [x_{n+1}^2 - 2x_n \bar{x}_n] \\ &= (n-1)s_n^2 + \frac{n\bar{x}^2}{n+1} + \frac{n}{n+1} [x_{n+1}^2 - 2x_n \bar{x}_n] \\ &= (n-1)s_n^2 + \frac{n}{n+1} (x_{n+1} - 2x_n \bar{x}_n + \bar{x}_n^2) \\ &= (n-1)s_n^2 + \frac{n}{n+1} (x_{n+1}^2 - \bar{x}_n^2) \end{aligned}$$

$$\text{c) } \bar{x}_n = 65.811 \text{ inches} \quad x_{n+1} = 64$$

$$s_n^2 = 4.435 \quad n = 37 \quad s_n = 2.106$$

$$\bar{x}_{n+1} = \frac{37(65.81) + 64}{37 + 1} = 65.76$$

$$s_{n+1} = \sqrt{\frac{(37-1)4.435 + \frac{37}{37+1}(64 - 65.811)^2}{37}}$$

$$= 2.098$$

6-95. The trimmed mean is pulled toward the median by eliminating outliers.

a) 10% Trimmed Mean = 89.29

b) 20% Trimmed Mean = 89.19

Difference is very small

c) No, the differences are very small, due to a very large data set with no significant outliers.

6-96. If $nT/100$ is not an integer, calculate the two surrounding integer values and interpolate between the two. For example, if $nT/100 = 2/3$, one could calculate the mean after trimming 2 and 3 observations from each end and then interpolate between these two means.
